

## WEEK 6: MINI PROJECT

//Task.js

```
import React from "react";
function Task({ task, removeTask, selectTask }) {
  const handleRemove = () => {
    removeTask(task.id);
  };
  const handleSelect = () => {
    selectTask(task);
  };
  return (
    <div>
      <h3>{task.title}</h3>

      <p>{task.description}</p>
      <button onClick={handleRemove}>Delete</button>
      <button onClick={handleSelect}>Edit</button>
    </div>
  );
}
export default Task;
```

//TaskList.js

```
import React from "react";
import Task from "./Task";
function TaskList({ tasks, removeTask, selectTask }) {
  return (
    <div>
      <h2>Task List</h2>
      {tasks.map((task) => (
        <Task
          key={task.id}
          task={task}
          removeTask={removeTask}
          selectTask={selectTask}
        />
      ))}
    </div>
  );
}
export default TaskList;
```

//AddForm.js

```
import React, { useState } from "react";
```

```
function AddForm({ addTask }) {
  const [title, setTitle] = useState("");
  const [description, setDescription] = useState("");
  const handleSubmit = (e) => {
    e.preventDefault();
    const task = {
      id: Math.floor(Math.random() * 10000),
      title,
      description,
    };
    addTask(task);
    setTitle("");
    setDescription("");
  };
  return (
    <div>
      <h2>Add Task</h2>
      <form onSubmit={handleSubmit}>
        <label>
          Title:
          <input
            type="text"
            value={title}
            onChange={(e) => setTitle(e.target.value)}
          />
        </label>

        <br />
        <label>
          Description:
          <textarea
            value={description}
            onChange={(e) => setDescription(e.target.value)}
          />
        </label>
        <br />
        <button type="submit">Add</button>
      </form>
    </div>
  );
}
export default AddForm;
```

//UpdateForm.js

```
import React, { useState, useEffect } from "react";
function UpdateTask({ selectedTask, updateTask, setSelectedTask }) {
  const [title, setTitle] = useState("");
  const [description, setDescription] = useState("");
  useEffect(() => {
    setTitle(selectedTask.title);
    setDescription(selectedTask.description);
  }, [selectedTask]);
  const handleSubmit = (e) => {
    e.preventDefault();
    const updatedTask = {
      id: selectedTask.id,
      title,
      description,
    };
    updateTask(selectedTask.id, updatedTask);
    setSelectedTask(null);
  };
  return (
    <div>
      <h2>Update Task</h2>

      <form onSubmit={handleSubmit}>
        <label>
          Title:
          <input
            type="text"
            value={title}
            onChange={(e) => setTitle(e.target.value)}
          />
        </label>
        <br />
        <label>
          Description:
          <textarea
            value={description}
            onChange={(e) => setDescription(e.target.value)}
          />
        </label>
        <br />
        <button type="submit">Update</button>
        <button onClick={() => setSelectedTask(null)}>Cancel</button>
      </form>
    </div>
  );
}
export default UpdateTask;
```
